

Enhances the biodegradation of plastic trash bags in a biologically active landfill.

Tough enough for any trash, without trashing our planet.

BioFlex Technology from Aluf Plastics is the latest innovation to be added to our portfolio of sustainable products.

In an effort to combat the inherent environmental concern about the production and disposal of plastic products into the waste stream, BioFlex technology is a brand of additives which enhance the biodegradation of plastic trash bags in a biologically active landfill (not available in all areas).*

*ASTM D5511 tests that represent biologically active landfills on a representative trash bag have shown about 50% biodegradation in two years.
